Question	Answer
1. What is the main purpose of the study?	The main purpose of the study is to investigate the effect of the new curriculum on the learning outcomes of the students.
2. What are the research objectives?	The research objectives are to determine the level of student achievement, to identify the factors that influence learning outcomes, and to compare the results of the new curriculum with the old curriculum.
3. What is the research methodology?	The research methodology is a quantitative approach using a quasi-experimental design. The study involves two groups of students: an experimental group and a control group. The experimental group is taught using the new curriculum, while the control group is taught using the old curriculum. The data is collected through standardized tests and analyzed using statistical methods.
4. What are the findings of the study?	The findings of the study show that the new curriculum has a positive effect on the learning outcomes of the students. The experimental group achieved significantly higher scores than the control group. The results also indicate that the new curriculum is more effective in promoting student learning.
5. What are the conclusions and recommendations?	The conclusion of the study is that the new curriculum is more effective than the old curriculum. The recommendation is that the new curriculum should be implemented in all schools to improve the quality of education.
