

TRIXIE

 **pezz**

Increase the pet's wellbeing with preventive healthcare:

Urine and worm tests for home use

Urine test for dogs

- test your pet's health data at home (haemoglobin, glucose, pH, ketones, protein, leucocytes, specific weight)
- detect signs for kidney diseases, urinary tract diseases and diabetes at an early stage
- improve the chances of healing for specific diseases, avoid serious progression of diseases and increase the pet's life expectancy

Package content:

Pezz test dish with integrated ISO 13485 certified test strip | holder made of eco-friendly cardboard

To the film:

How to test:

Install the free Pezz app, create your profile and let yourself be guided through the test step by step.

1. Collection:
Collect the urine in the test dish

2. Scan:
Scan the test strip at the base of the test dish

3. Result:
The AI-based analysis is being checked by lab experts and is then sent asap to your app including further recommendations for action

Urine test for cats

- test your pet's health data at home (**haemoglobin, glucose, pH, ketones, protein, leucocytes, specific weight**)
- detect signs for kidney diseases, urinary tract diseases and diabetes at an early stage
- improve the chances of healing for specific diseases, avoid serious progression of diseases and increase the pet's life expectancy

To the film:

Package content:

A sufficient amount of non-absorbent special sand, even for large cat litter trays | Pezz test dish with integrated ISO 13485 certified test strip | handle made of eco-friendly cardboard | syringe with sealing cap to draw up the urine

How to test:

Install the free Pezz app, create your profile and let yourself be guided through the test step by step.

1. Collection:

Fill the cat litter tray with the special sand and collect the urine using the disposable syringe

2. Scan:

Fill the urine into the test dish and scan test strip on the base

3. Result:

The AI-based analysis is being checked by lab experts and is then sent asap to your app including further recommendations for action

Worm test for dogs and cats

- Laboratory tests for the most common **types of worms** (roundworms, whipworms, hookworms), **Coccidia** and **Giardia**
- detect worm infestation early on
- avoid unnecessary deworming
- for monitoring the success of a giardia treatment

Package content:

Three sample containers each and collection sticks | packaging material for return shipment

How to test:

Install the free Pezz app or activate the test at www.pezz.life/start and receive a free return shipment label

1. Collection:

Collect samples of faeces on three days

2. Shipping:

Send the samples to the Pezz lab free of charge (packaging material included)

3. Result:

Receive detailed lab report (e.g. for the vet) within 2 to 4 days by e-mail. Deworm only if necessary.

Lab diagnostics at Pezz

The Pezz team is made up of veterinarians, scientists and lab specialists.

In order to identify infections with hookworms, roundworms whipworm, coccidia as well as giardia, the faeces samples are systematically processed using state-of-the-art diagnostics methods and evaluated by our experts.
